
(a) one defect, $n = 24$ (log scale)
removed tip
(b) exact boundary laws, $n = 44$
adjacent side (exact)
$P(\mathrm{Bin}(n, \frac{1}{2}) \geq k)$
far side $\times 10$
$\binom{n-1}{k-1} 2^{-n} \times 10$
weight
position k along the side
(c) boundary-layer trapping
total weight
10^{-1}
off the adjacent side
interior
far side
n
